I HAVE DIABETES. I may be having a very high or low blood glucose reaction. These can lead to coma or death if they are untreated. If I am not alert or I cannot swallow, do not try to give me anything to eat or drink. Call 911.

Very Low Blood Glucose (Hypoglycemia)

Signs (may look like drug or alcohol intoxication): I may be shaky, sweaty, staggering, combative, confused, or acting strangely. I may also slur speech, have a seizure, or become unconscious.

Treatment for Very Low Blood Glucose:
- If I’m awake and can swallow, give me a source of sugar, such as 4 glucose tablets, ½ cup regular juice or sugary soda, 1 cup nonfat or 1% milk, 1 Tbsp. sugar or honey, or hard candy or jellybeans.
- Stay with me as I rest and check my blood glucose every 15 minutes. I may need more sources of sugar to eat or drink.
- If I do not get better or my blood glucose does not rise above 70 mg/dl, call 911 or get me to a hospital.

See other side for emergency treatment of very high blood glucose.

Very High Blood Glucose (Hyperglycemia)

Signs (may look like drug or alcohol intoxication): I may be drowsy, confused, urinating often, vomiting, and/or have blurry vision. My skin may be flushed and my breath may have a fruity odor.

Treatment: Focus on fluid intake, insulin, and my medication.

Diabetes emergencies may be hard to spot. This card helps first responders, family members, and others recognize these emergencies and help.
I HAVE DIABETES. I may be having a very high or low blood glucose reaction. These can lead to coma or death if they are untreated. If I am not alert or I cannot swallow, do not try to give me anything to eat or drink. Call 911.

Very High Blood Glucose (Hyperglycemia)

Signs (may look like drug or alcohol intoxication): I may be drowsy, confused, urinating often, vomiting, and/or have blurry vision. My skin may be flushed and my breath may have a fruity odor.

Treatment: Severe hyperglycemia can lead to coma or death if untreated. I have a medical need to test my blood glucose, take my insulin (if used), drink water, and have access to a bathroom.

How to help
Give a source of sugar if the person:
• Is known to have diabetes
• Is confused or combative
• Can swallow

Sources of sugar include:
1/2 cup regular juice or sugary soda, 4 glucose tablets, or 1 tablespoon sugar or honey.

Warning: Do not give food or drink to a person who cannot swallow. Immediately seek medical care. Call 911.

SEVERE HYPOGLYCEMIA is very low blood glucose, sometimes called low blood sugar. It can be mistaken for drug or alcohol intoxication. It can lead to coma or death if untreated.

What are causes?
• Lack of insulin
• Not enough insulin
• Illness
• Dehydration
• Medical problems, emergencies

What are signs/symptoms?
The following signs and symptoms of very low blood glucose may require first aid. They can develop slowly:
• Feeling drowsy, sleepy
• Confusion
• Extreme thirst
• Frequent urination
• Flushed skin
• Fruity breath odor (may be mistaken for alcohol)
• Heavy breathing
• Nausea, vomiting
• Being unconscious

How to help
If the person is unresponsive, call 911. Otherwise, have him or her:
• Test blood glucose
• Take insulin, if used
• Drink water
• Tell you if medical care is needed
