The Burden of Diabetes in California

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 34 million Americans have diabetes and face its devastating consequences. What’s true nationwide is also true in California.

California’s diabetes epidemic:

- Approximately **3,209,418** people in California, or 10.5% of the adult population, **have diagnosed diabetes**.
- An additional **884,000** people in California **have diabetes but don’t know it**, greatly increasing their health risk.
- There are **10,320,000** people in California, 33.4% of the adult population, who have **prediabetes** with blood glucose levels that are higher than normal but not yet high enough to be diagnosed as diabetes.
- **Every year** an estimated **272,814 people in California** are diagnosed with diabetes.

Diabetes is expensive:

People with diabetes have **medical expenses approximately 2.3 times higher** than those who do not have diabetes.

- Total **direct medical expenses** for diagnosed diabetes in California were estimated at **$27 billion** in 2017.
- In addition, another **$12.5 billion** was spent on **indirect costs** from lost productivity due to diabetes.

Improving lives, preventing diabetes and finding a cure:

The **Division of Diabetes Translation** at the CDC provided **$5,793,169** in diabetes prevention and educational grants in California in 2018.
