

The Burden of Diabetes in Connecticut

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 34 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in Connecticut.

Connecticut's diabetes epidemic:

- Approximately **275,491 people in Connecticut**, or 9.6% of the adult population, **have diagnosed diabetes**.
- An additional **79,000 people in Connecticut have diabetes but don't know it**, greatly increasing their health risk.
- There are **944,000 people in Connecticut**, 33.1% of the adult population, who have **prediabetes** with blood glucose levels that are higher than normal but not yet high enough to be diagnosed as diabetes.
- **Every year** an estimated **24,881 people in Connecticut** are diagnosed with diabetes.

Diagnosed diabetes costs an estimated \$3.7 billion in Connecticut each year.

The serious complications include heart disease, stroke, amputation, end-stage kidney disease, blindness—and death.

Diabetes is expensive:

People with diabetes have **medical expenses approximately 2.3 times higher** than those who do not have diabetes.

- Total **direct medical expenses** for diagnosed diabetes in Connecticut were estimated at **\$2.7 billion in 2017**.
- In addition, another **\$960 million** was spent on **indirect costs** from lost productivity due to diabetes.

Improving lives, preventing diabetes and finding a cure:

The **Division of Diabetes Translation** at the CDC provided **\$841,162** in diabetes prevention and educational grants in Connecticut in 2018.
