The Burden of Diabetes in Colorado

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 37 million Americans have diabetes and face its devastating consequences. What’s true nationwide is also true in Colorado.

Colorado’s diabetes epidemic:

- Approximately 311,554 people in Colorado, or 6.9% of the adult population, have diagnosed diabetes.
- An additional 117,000 people in Colorado have diabetes but don’t know it, greatly increasing their health risk.
- There are 1,444,000 people in Colorado, 32.9% of the adult population, who have prediabetes with blood glucose levels that are higher than normal but not yet high enough to be diagnosed as diabetes.
- Every year an estimated 34,291 people in Colorado are diagnosed with diabetes.

Diabetes is expensive:

People with diabetes have medical expenses approximately 2.3 times higher than those who do not have diabetes.

- Total direct medical expenses for diagnosed diabetes in Colorado were estimated at $2.6 billion in 2017.
- In addition, another $1 billion was spent on indirect costs from lost productivity due to diabetes.

Improving lives, preventing diabetes and finding a cure:

In 2021, the National Institute of Diabetes and Digestive and Kidney Diseases at the National Institutes of Health invested $45,143,620 in diabetes-related research projects in Colorado. The Division of Diabetes Translation at the CDC provided $2,334,360 in diabetes prevention and educational grants in Colorado in 2018.
