The Burden of Diabetes in Maine

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 37 million Americans have diabetes and face its devastating consequences. What’s true nationwide is also true in Maine.

Maine’s diabetes epidemic:

- Approximately 113,136 people in Maine, or 10% of the adult population, have diagnosed diabetes.
- An additional 32,000 people in Maine have diabetes but don’t know it, greatly increasing their health risk.
- There are 373,000 people in Maine, 35.1% of the adult population, who have prediabetes with blood glucose levels that are higher than normal but not yet high enough to be diagnosed as diabetes.
- Every year an estimated 8,174 people in Maine are diagnosed with diabetes.

Diabetes is expensive:

People with diabetes have medical expenses approximately 2.3 times higher than those who do not have diabetes.

- Total direct medical expenses for diagnosed diabetes in Maine were estimated at $1 billion in 2017.
- In addition, another $365 million was spent on indirect costs from lost productivity due to diabetes.

Improving lives, preventing diabetes and finding a cure:

In 2023, the National Institute of Diabetes and Digestive and Kidney Diseases at the National Institutes of Health invested $1,629,277 in diabetes-related research projects in Maine.

The Division of Diabetes Translation at the CDC provided $4,705,485 in diabetes prevention and educational grants in Maine in 2021.
