The Burden of Diabetes in Utah

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 38 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in Utah. Obesity is linked to up to 53 percent of new cases of type 2 diabetes each year. Treating the chronic disease of obesity can help prevent, delay, and even result in diabetes remission.

**Utah Diabetes Epidemic**
- Approximately 191,000 adults in Utah, or 7.7% of the adult population, have diagnosed diabetes.
- Every year, an estimated 14,600 adults in Utah are diagnosed with diabetes.

**Utah Obesity Epidemic**
- Approximately 769,600 adults in Utah, or 31.1% of the adult population, have obesity.

**Diabetes is expensive:**
Americans with diabetes have medical expenses approximately 2.6 times higher than those who do not have diabetes. And the total estimated cost of diagnosed diabetes in the U.S. in 2022 was $412.9 billion, including $306.6 billion in direct medical costs and $106.3 billion in reduced productivity attributable to diabetes.

In 2017 it was estimated that:
- Total direct medical expenses for diagnosed diabetes in Utah was $1.2 billion.
- Total indirect costs from lost productivity due to diabetes was $498 million.
- Total cost of diabetes was $1.7 billion.

**Obesity is expensive:**
Americans with obesity had related medical care costs of an estimated $173 billion in 2019. Having obesity more than doubles an individual's health care costs and out-of-pocket cost for care.

- A person with obesity or overweight with employer-provided health insurance had an average of $12,588 in total yearly health costs, compared to $4,699 for those without overweight or obesity.
- In 2021, a person with obesity with employer-provided health insurance faced an average of $1,487 in out-of-pocket costs, compared to $698 for those without obesity.

**To aid the efforts of improving lives, preventing diabetes, and finding a cure:**
In 2024, the National Institute of Diabetes and Digestive and Kidney Diseases at the National Institutes of Health invested $779,192 in diabetes-related research projects in Utah. The Division of Diabetes Translation at the CDC provided $2,024,416 in diabetes prevention and educational grants in Utah 2022.
