

The Burden of Diabetes in Wyoming

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 38 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in Wyoming. Obesity is linked to up to 53 percent of new cases of type 2 diabetes each year. Treating the chronic disease of obesity can help prevent, delay, and even result in diabetes remission.

Wyoming Diabetes Epidemic

- Approximately 39,300 adults in Wyoming, or 8.7% of the adult population, have diagnosed diabetes.
- Every year, an estimated 2,700 adults in Wyoming are diagnosed with diabetes.

Wyoming Obesity Epidemic

- Approximately 155,500 adults in Wyoming, or 34.3% of the adult population, have obesity.

Diabetes is expensive:

Americans with diabetes have medical expenses approximately 2.6 times higher than those who do not have diabetes. And the total estimated cost of diagnosed diabetes in the U.S. in 2022 was \$412.9 billion, including \$306.6 billion in direct medical costs and \$106.3 billion in reduced productivity attributable to diabetes.

In 2017 it was estimated that:

- Total direct medical expenses for diagnosed diabetes in Wyoming was \$311 million.
- Total indirect costs from lost productivity due to diabetes was \$113 million.
- Total cost of diabetes was \$424 million.

Obesity is expensive:

Americans with obesity had related medical care costs of an estimated \$173 billion in 2019. Having obesity more than doubles an individual's health care costs and out-of-pocket cost for care.

- A person with obesity or overweight with employer-provided health insurance had an average of \$12,588 in total yearly health costs, compared to \$4,699 for those without overweight or obesity.
- In 2021, a person with obesity with employer-provided health insurance faced an average of \$1,487 in out-of-pocket costs, compared to \$698 for those without obesity.

To aid the efforts of improving lives, preventing diabetes, and finding a cure:

In 2024, the National Institute of Diabetes and Digestive and Kidney Diseases at the National Institutes of Health did not invest in diabetes-related research projects in Wyoming.

The Division of Diabetes Translation at the CDC provided \$424,151 in diabetes prevention and educational grants in Wyoming 2022.
